

Your shop should sell. Not stall.

Every second of load time measurably costs revenue; open security holes cost far more when it goes wrong. I build and maintain online shops for retailers and manufacturers: from the performance cure for existing Magento shops to the B2B ordering portal that doesn't exist yet.

Performance with Hyvä

Fast load times, better Core Web Vitals, more conversion. Measurable before and after. Details on the [Hyvä page](#).

Security & maintenance

Patches, security headers, updates. Before the wrong visitor checks, not after.

B2B ordering portals

Your customers order themselves instead of by fax and phone. With customer price lists, approvals and integration with your systems.

Integration & data flow

Shop, ERP, PIM and inventory talk to each other. Automated instead of by hand, see [Automation](#).

From real projects

Kaufhaus der Berge

Magento 2 multi-store (DE/EN/IT) on Hyvä: customised Mollie checkout, Akeneo PIM integration, ongoing development partnership.

Vitafy Brands

Integration layer for the multi-brand platform and automated fulfilment across several warehouses.

Tyrol shop audit

303 online shops from Tyrol measured for load time and security. [The results are on the blog](#).

Getting started: the quick check.

In a free 30-minute call I look at your shop live with you. You'll see immediately where you stand and what pays off first.
